DETAILED ACTION

1. This office action is a response to applicant's amendment filed 02/06/2009. In virtue of this amendment, claims 1-11 are currently in the instant application.

Interview Summary

2. Examiner contacted applicant's representative, Daniel Dawes (Registration No. 27,123), on May 1, 2009 for discussing about a proposed amendment. Examiner suggested applicant to clarify the claimed language of claims 1, 5, 8; incorporate the subject matter of claim 3 into claim 1; and change the dependencies of claims 4, 8 and 9 from claim 3 to claim 1 in order to place the application in allowance condition. Applicant's representative agreed to authorize examiner to clarify claimed language of claims 1, 5, 8; incorporate the subject matter of claim 3 into claim 1, and change the dependencies of claims 4 and 8-9 from claim 3 to claim 1 in examiner's amendment.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Daniel Dawes (Registration No. 27,123), on May 1, 2009.

The application has been amended as follows:

1 (Currently Amended) A dish assembly including:

a central hub;

an outer rim member, and

a plurality of concentric arcuate structural members comprising at least an inner and an outer arcuate structural members extending from the central hub to the outer rim member;

each of the arcuate structural members having an upper channel member, a lower channel member, an inner arcuate surface and an outer arcuate surface which cooperate to constitute a box section configuration, and wherein said each upper and lower channel member comprises a channel base and a pair of channel flanges; ~~being of box section configuration and~~

the inner and outer arcuate surfaces of each of the arcuate structural members are abutted such that a gravitational or wind load ~~can be~~ is transferred from ~~radially outward the outer~~ the outer arcuate structural member to ~~an~~ the adjoining ~~more radially inward inner~~ inner arcuate structural member via a fin disposed on the inner arcuate surface of each of the arcuate structural members.

3 (canceled)

4. (Currently Amended) The dish assembly as claimed in claim 3 1, wherein the upper and lower channel members are formed from substantially rectangular metal sheeting.

5. (Currently Amended) The dish assembly as claimed in claim 4, wherein the gauge of the metal sheeting ~~from which the arcuate structural members are made~~ of each inner arcuate structural member is greater the gauge of each outer

Art Unit: 2821

~~in an arcuate structural member that is radially closer to the central hub than in an arcuate structural member that is radially further from the central hub.~~

8. (Currently Amended) The dish assembly as claimed in claim 3, wherein the said channel flanges of the upper and lower channel members have outwardly and inwardly directed returns at the respective bases thereof, such that when the upper and lower channel members cooperate to constitute the arcuate structural member of box section configuration, the returns constitute cooperating keys and recesses respectively of adjoining concentric arcuate structural members whereby said wind load ~~can be~~ is transferred from ~~an radially outward~~ the outer arcuate structural member to ~~an adjoining more radially inward~~ the adjoining inner arcuate structural member.

9. (Currently Amended) The dish assembly as claimed in claim ~~3~~ 1, and including a plurality of mirrors affixed to the bases of the upper channel members whereby the dish assembly constitutes a solar collector.

Allowable Subject Matter

4. Claims 1-11 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Prior art fails to disclose or fairly suggest a dish assemble, wherein each of the arcuate structural members of dish assembly having an upper channel member, a lower channel member, an inner arcuate surface and an outer arcuate surface which cooperate to constitute a box section configuration, and wherein said each upper and lower channel member comprises a channel base and a pair of channel flanges; and

the inner and outer arcuate surfaces of each of the arcuate structural members are abutted such that a gravitational or wind load is transferred from the outer arcuate structural member to the adjoining inner arcuate structural member via a fin disposed on the inner arcuate surface of each of the arcuate structural members, in combination with the remaining claimed limitations as in claim 1 (claims 2 and 4-11 are allowed since they are dependent on claim 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
